

Skills

UX Research & Analysis

User interviews, surveys, usability testing, requirements gathering, product discovery

Competitive analysis, affinity mapping, journey mapping

Research synthesis and data-informed design

Interaction & Product Design

Information architecture, user flows, interaction design

Complex workflow design, wireframing, prototyping, responsive design

Design systems, component libraries, and accessibility informed by WCAG

UX writing, content design, and error-state messaging

Facilitation & Collaboration

Design jams and collaborative workshops

Stakeholder presentations and cross-functional iteration

Design handoff, annotations, design QA, and implementation review

Design, Analytics & AI Tools

Figma, UXPin, Miro, Google Analytics, Figma Make, Google Stitch, GitHub Copilot

Technical Fluency

React, JavaScript, TypeScript

HTML5, responsive CSS, SQL

Education

UX Professional Diploma

Awarded May 2024
UX Design Institute

BA Applied Computer Science

Awarded December 2016
Kennesaw State University
Magna Cum Laude

CHELSEA VIDRINE

Summary

Product designer with 8+ years of digital product experience spanning UX, front-end engineering, and quality assurance in retail and e-commerce. Experienced translating validated user needs into scalable, implementation-ready solutions that reduce friction in high-volume customer journeys and deliver measurable business impact.

Career Experience

Sr. Software Engineer at Aaron's

Retail | e-commerce | rent-to-own
March 2017 – Present

- Led an end-to-end UX sprint for a unified payment workflow that allowed stores to process multiple customer agreement payments at once, replacing a repetitive agreement-by-agreement process; facilitated a design jam, validated needs with store users, iterated with design and product partners, and carried the approved solution through handoff and implementation.
- Improved customer acquisition and onboarding by identifying friction through user feedback and usability insights, redesigning end-to-end UI flows to reduce application drop-off and completion time by 50%.
- Partnered with UX team to implement a fully remote web application, expanding business operation online during the COVID pandemic, streamlining onboarding and engagement through interactive flows, contributing to a 60% increase in closed deals.
- Collaborated with design, product, and engineering partners to iterate on loyalty and autopay experiences supporting nearly two million customer enrollments.

Quality Assurance Specialist at MiMedx

Pharmaceuticals | Healthcare | Manufacturing
December 2014 - March 2017

- Ensured accuracy and compliance of high-volume documentation in a regulated environment, reducing errors through consistent quality review and process adherence.
- Nearly doubled review throughput by introducing a digital task-tracking and communication workflow that improved team coordination and project turnaround.
